Fire Hydrant Flushing Program

The City of Rock Island Public Works Department will begin the Fall Fire Hydrant Flushing Program on Monday, September 14, 2009 at 7:00 a.m. Crews will be flushing hydrants for approximately a four week period.

The purpose of this program is to help maintain water quality standards and the fire protection system. Citizens may experience brief periods of discolored water or low pressure which is normal during flushing operations. Questions may be directed to the Public Works Department at 732-2200.
