

How Does the Program Work?

The general procedure for this program is:

1. The property owner determines the project design and pays for the cost of the design.
2. The property owner submits a program application and allows the City access onto their property for project reviews.
4. The City reviews the design for compliance with the program and determines which project will be funded.
5. The City notifies the applicants if they are accepted in the program.
6. The property owner hires the contractor and pays for all of the costs of the improvements.
7. During construction, the property owner submits weekly status reports to the City (only one status report per project is required).
8. The property owner submits a request for a final project review.
9. The City performs a final review and determines if the project meets the Rock Island Drainage Assistance Program requirements.
10. Once the project meets the requirements, the City processes the reimbursement.

How Do I Obtain More Information?

For additional information, please contact Andy Parer, Stormwater Technician, at 732-2275 or visit the city's website at www.rigov.org.

Rock Island Drainage Assistance Program

City of Rock Island
Public Works Department

The Rock Island Drainage Assistance Program (RIDAP) was created to build a partnership between the City and private property owners who have damage on their property caused by storm water from more

than just their property. An ideal project would involve a neighborhood solution to the storm water problem; for example, a stream bank stabilization project through a neighborhood.

Eligibility Requirements

1. Damage to the property must come from stormwater from other properties.
2. Projects must attempt to permanently resolve drainage problems.
3. Designs are acceptable to the City.
4. No work is done until the city has accepted the project into the program.
5. Property owner must contribute 25% of the project cost.

Project Selection

Projects will be selected by determining if they meet the eligibility requirements. Eligible neighborhood projects will be placed on the neighborhood list. Eligible projects for one property owner will be placed on the individual list. Each list is sorted by lowest cost to highest cost (based on City participation). Neighborhood projects are funded first starting with the lowest cost neighborhood project and working down the list until all neighborhood projects have been funded. If there is funding available, the individual list will be funded starting at the least cost project and working down the list to the most expensive project.

Project Payment

The first 25% of the project cost must be paid by the property owner. This program is a partnership and therefore requires the property owner to participate financially. If a contractor performs the work, the RIDAP will contribute up to 75% of the project cost not to exceed \$3,000 per property. If a property owner performs the work themselves, RIDAP will reimburse 75% of the material costs only, not to exceed \$3,000 per property.

Property owners are required to investigate additional funding sources. One of the sources may be the U.S. Department of Agriculture Streambank Stabilization and Restoration Program administered through the Rock Island County Soil and Water Conservation District (309-764-1486).

Funding and/or grants from other sources will improve the chance of being funded through the Rock Island Drainage Assistance Program because it reduces the City's cost of participation.

City of Rock Island's Role

The City of Rock Island will act as the grant administrator. The City will accept the program applications, determine eligibility, review designs and notify property owners of acceptance into the program. The City will review the work during construction and will complete a final project review. Once the project passes the review and has met all of the program requirements, the City will process the application for reimbursement.

Property Owner's Role

The property owner is responsible for the design of the improvements, to obtain bids for the work, complete and submit the program application, provide the City access to the project, hire the contractor, complete the improvements, pay the contractor, request a final project review and submit the application for reimbursement.

Deadlines

Program applications will be taken on an on-going basis until all allocated funding has been spent during that fiscal year. The City will notify the property owners if they were accepted into the Rock Island Drainage Assistance Program. Construction will need to be completed within six months or forfeit the Rock Island Drainage Assistance Program resources.
